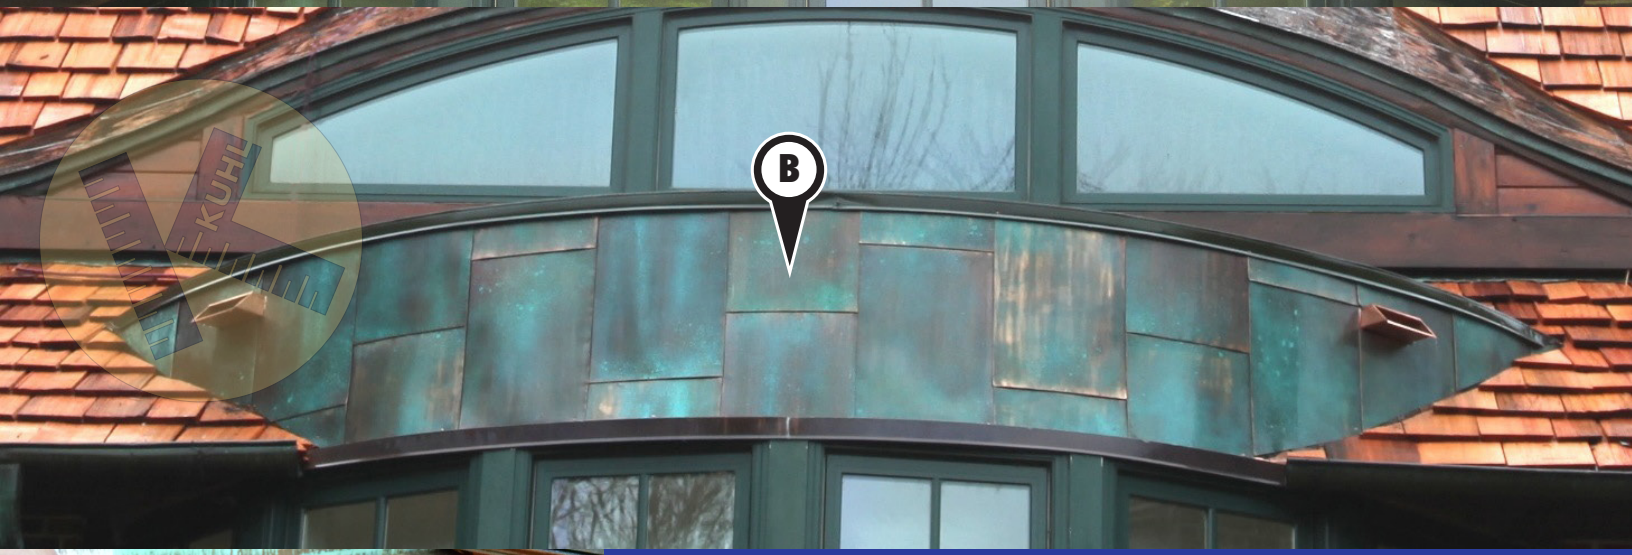
CASE STUDY

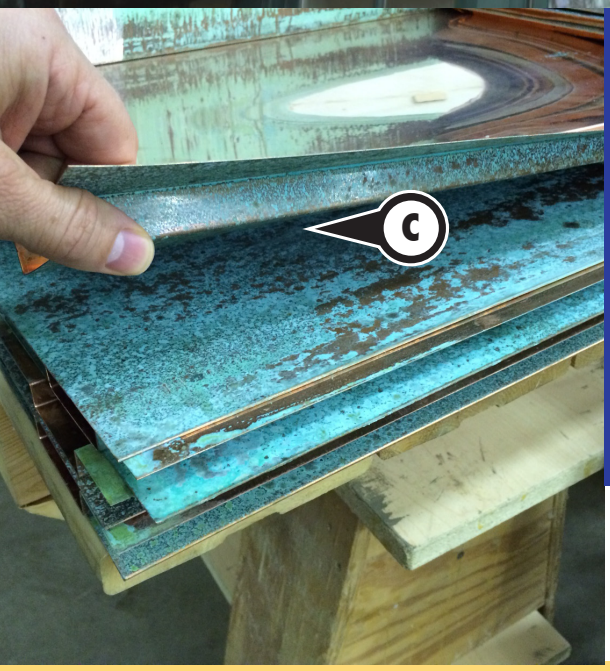
KUHL SOLUTIONS TO CLIENT PROBLEMS

KUHL CASE #47

Minneapolis Sheet Metal Contractor of the Year

How to age copper to blend in with existing copper by creating a patina





Patina on copper....

Our client was replacing his cedar roof on his home in Woodland, a small city on the southern edge of Lake Minnetonka, Minnesota. The problem, he couldn't find anyone able to deal with his copperwork. Specifically, he wanted to replace a number of worn out cedar shingle siding areas around his home with copper than looked old. After interviewing a number of roofing and sheet metal contractors he found us through a local high-end builder for which we frequently work. We used a prioprietary system to patina new copper sheets to create the look he desired. The outcome was exactly what he wanted.

(A) Old cedar shingle siding

(B) New copper, aged to look old

(C) Copper in the Kuhl Shop, before installation
